

## ***Looking at the catchment?***

A catchment is an area that catches rain and diverts the rain water to a creek or river.

List TEN different things (living, non-living, constructed, manufactured) that you might find in the catchment area. You can use the above picture for help!

We all live and work in catchments and depend on them for our survival.

\* The food we eat is grown here.

\* The water we drink flows from the land we use for many other things.

The different land uses in our catchments can effect the quality of the water that flows into our rivers and creeks.
